MCG'S VERSIFY WORKFORCE

Versify Workforce is MCG's comprehensive Health, Safety, and Environmental (HSE) software solution designed to advance and streamline the HSE Management process, hosted in MCG Energy's FedRAMP® Authorized, SOC and NIST SP 800-53 compliant Private Cloud. Workforce's management tools, including Permit to Work (PTW), are available on mobile devices and desktops, reducing the administrative burden on staff and enhancing compliance and communications. Standardized forms and checklists simplify the process of meeting OSHA and other regulatory standards and best practices. Key safety procedures such as Permit to Work (PTW), Job Hazard Analysis (JHA/JSA), Incident Reporting, Inspections, Observations, Job Safety Analysis (JSA), Isolations, and Lockout Tagout (LOTO), can be configured to your specific needs.

Workforce uses Versify's advanced web-based desktop and mobile platform. By leveraging the Versify digital logbook, workflow engine, and electronic form builder, customers can use Workforce to create their own digital forms and processes and route those forms for review and approval by proper authorities as needed. Electronic forms and instructions are accessible to field technicians and maintenance crews on virtually any mobile device.

A consistent and effective Control of Work (COW) or Integrated Safe System of Work (ISSOW) procedure is critical to meeting OSHA and other regulatory standards. Workforce's templates can be adjusted to meet your organization's particular requirements.
